LocationAware's goal is to help drive the standardization of how a user's geolocation is exposed to a website through the browser
var geolocator = new navigator.GeolocationRequest();

geolocator.request(function(location) {
    alert(location.latitude + ',' + location.longitude);
});
var geolocator = new navigator.GeolocationRequest();

geolocator.request({
    success: function(location) { /* success */ },
    error: function(err){ /* error */ },
    ...
});
Prototype extension to explore geolocation in the browser. Available in June
