- Inside page: grid based layout, columns, drop in content for Orange page. (On your own: layout the Banana page.)
- Navigation bar.

10:30-10:45 break

10:45-11:45 AM:

- Thumbnail grid (Gallery page)
- Modal (Gallery page)
- Carousel (Apple page)
- LESS CSS

Configuring your starting Bootstrap site

1. Start a new folder on your desktop called **fruit**. Place the Bootstrap folders inside (from the folder “bootstrap 2.3.2 as downloaded”)
2. Place jQuery inside of the js folder inside of fruit (from “jQuery as downloaded”)
3. Copy all images, as individual images and in their folders exactly as configured, from the “images” folder to the “img” folder inside of the “fruit” folder.
4. Start a new HTML5 file. Make links to CSS and JS.
5. I have provided jump-in files for bits of code we’ll be covering along the way. You can copy and paste code from there into the relevant locations on the page.
